

# Hearing Aid TWS Headphone

AEP-0251

Number of digital  
16 channels

Adaptive enviro  
nment noise  
reduction

V5.2 chip

Antibacterial  
earbuds

Lower power  
consumption

Separate volu  
me control

To raise and  
stop howling

IP54 waterproof  
and dustproof

工厂认证 Sedex 4P BSCI ISO9001 工厂认证

Easy operation

Easy operation

# No need for matching Older people use it more easily

Suitable for people with mild to moderate hearing loss  
Simply adjust the volume to regain clear vocals

Intelligent noise reduction

INTELLIGENT NOISE REDUCTION

# Voice compensation restoration commun ication

By utilizing intelligent hearing compensation technology, we can assist the elderly or those in need. Improving the listening experience for people with increased communication needs.

## reduce noise

Reduce environmental noise and enjoy music better

## Touch control noise reduction

Mode switching is simpler and more convenient

## Auxiliary listening mode

Increase ambient sound to the ear

Intelligent sound compensation

Intelligent sound compensation

# Digital 16 channel Clear voice

Imitating the auditory organ of the human ear, the cochlea has multiple channels to perceive the outside world. Sound compensation for better listening quality, using non equal two free listening. It also avoids the phenomenon of inaudible speech!

Easy to  
operate

Easy to u  
nderstand

Easy to com  
municate

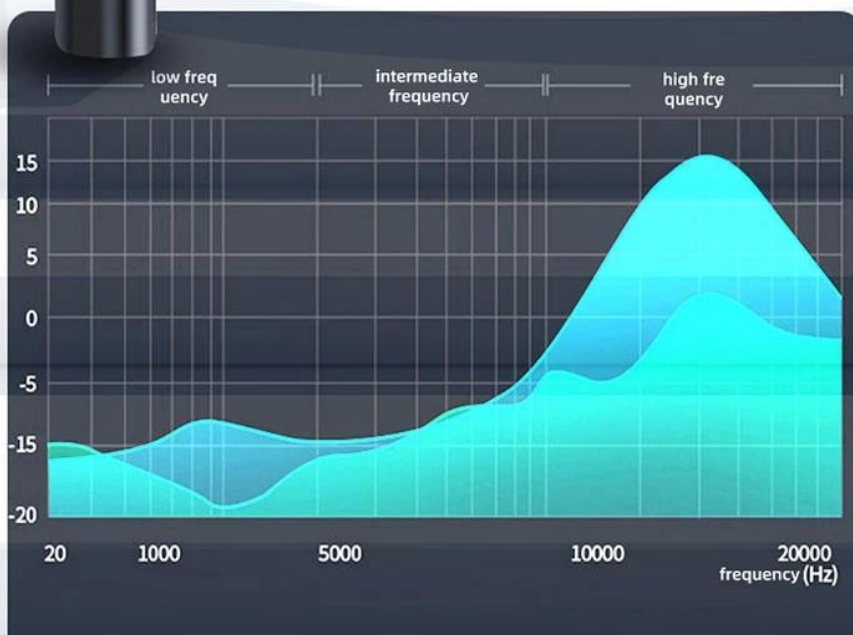

portable

Dynamic coil unit

DYNAMIC COIL UNIT

# Full frequency dyna mic coil unit Restore clear vocals

Millisecond speed transmission without delay - high spatial stereo sound reproduction with polymer matching diaphragm Clear vocals, prominent instrument details, overall triple frequency balance, and distinct levels When enabling auxiliary listening mode, the sound quality is clear without distortion

Separate design

LONG WEAR WITHOUT PAIN

# 45 ° fitting to the ear canal Switch between one and two ears at will

Ergonomic design, comfortable and stable to wear, not easy to fall off Natural fit, comfortable and seamless, with a separate design for the left and right ears Increase or decrease the volume separately, making it easy and not tiring

## Master-slave switching

Both earphones can individually increase or decrease volume More convenient and clear

Ergonomic design that fits snugly to the ear

Soft eartips do not cause pain in the ear canal when worn for a long time

Bluetooth 5.2 chip

BLUETOOTH 5.2 CHIP

# Upgrade Bluetooth 5.2 smart chip

WDRRC single sided 16 channel adaptive wide dynamic range compression (for multi frequency bands Compensate for expansion processing, while effectively verifying the gain, set the Hearing protection mechanism to prevent damage caused by excessive sound reception The phenomenon of low sound and insufficient gain)

Bluetooth 5.2  
High output, faster

Built-in intelligent hearing aid chip  
Integrating multiple hearing assistance algorithms to compensate for sound

# Adaptive noise reduction algorithm Multiple scene free switching modes

Four listening scenarios are achieved through technologies such as wind noise control, environmental noise reduction, and impact noise control. Easily cope with various changes in life while blocking high decibel sound input during blasting. Impact to avoid sudden extreme situations that can cause ear damage.

Indoor communication

Outdoor communication

Daily communication

Noisy environment

Make love "sound" level

# To fulfill one's filial piety Let love be audible

They can hear your love
